

WHO WE ARE

Slalom is the world’s largest privately owned technology services firm, known for our market-leading digital modernization solutions and our proven record of success serving commercial and public sector clients.

HOW WE’RE DIFFERENT

Slalom is not just another government contracting firm or legacy systems integrator. **We are a technology company who can help government modernize.** Our federal practice is not a separate entity—the teams that deliver for some of the largest commercial brands in the world are the same teams that deliver for our federal clients. We work to deeply understand your “why” and deliver practical, end-to-end solutions. We partner with your teams every step of the way, teaching and empowering them to continue the momentum even after we leave.

MARKET-LEADING SUCCESS

Our partnerships with over 700 of the world’s leading technology providers help us fuel innovation and sustainable growth for our customers. We are recognized as a top global partner by leading cloud technology providers.

WE BRING COMMERCIAL BEST PRACTICES TO GOVERNMENT

We are trusted by the majority of the Global 1000, many of the world’s most successful enterprise, mid-market, and emerging companies, and more than 500 public sector agencies, foundations, and universities. We combine commercial best practices with federal expertise and collaborate with you to customize **solutions that steward taxpayer dollars responsibly while delivering lasting results**. Our clients recognize the value we deliver – **32% of our customers said we delivered 5x value or more**.

What we do

AI and Data Management

Digital Transformation

Cloud Migration and Transformation

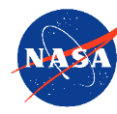

Product Innovation

Technology Strategy

Enterprise Business Applications

Organizational change

Where we’ve done it

FEDERAL CUSTOMER STORY

U.S. Citizenship and Immigration Services (USCIS) wanted to modernize its legacy systems, which were constructed over the last 20 years by several distinct contractors with different technical approaches that added significant weight to the technical ecosystem and prevented USCIS from adopting modern, efficient development and operating models.

What we did

- Slalom developed a future-state architecture to transition the legacy applications from on-prem to a modern cloud-based platform on AWS, while coordinating system dependencies and simultaneously implementing data security.
- A massive batch of outdated technologies across 8 products on Oracle databases were “retired” and moved to the AWS cloud.

Outcome

- 8 legacy products transitioned
- Reduced spend by \$1M annually
- 66% Decreased Extract, Transform, and Load (ETL) runtime
- 1,000 government agency interfaces impacted

Let’s redefine what’s possible and create a better future, together.

Our purpose is to help people and organizations dream bigger, move faster, and build better tomorrows for all.
